FRAMEXPERIENCE

Project Description

FrameXperience is a mobile based Augmented Reality application that enables users to try on different glasses on their face virtually, before they make a purchase.

The user is able to scroll, search, and select various glasses frames that they can try on their face virtually through the phone screen.

The application bridges the gap between real-world decision making and digital browsing, helping consumers to be confident in their purchases.

Model

Mobile AR

Virtual Try-on
AR
Eyewear

FRAMEXPERIENCE

Project Description

The application integrates with the front facing phone camera to simulate glasses on the users face.

Powered by AR technology, it seamlessly maps and simulates glasses on the face of the user.

This offers a lifelike preview for the user of the appearance of a glasses frame on their face.

Design Process

Design Philosophy: User-Centric & Intuitive

Development Process

Agile Scrum Methodology

- **User Stories**

Broke down the project requirements into smaller, manageable user stories.

- **Short Development Cycles, Regular Team Meetings, Continuous Improvement**

Regular team meetings to discuss progress, identify roadblocks, and plan upcoming work.

Continuous integration of new features and regular testing within the team to ensure stability and gather feedback for the next cycle.

- **Technology-Driven Feature Implementation**

Features were added incrementally in cycle by cycle, based on prioritized user stories.

Individual Contributions

Jy Fung Peh Technical Lead

Glasses try-on page

- Built AR overlay & face-tracking.
- Optimised model texture and color

Category

- Implement the category system
- Category applies for both home page and Glasses try-on page

Navigation Menu

- Implement Navigation Bar

● Category

Filtered glasses based on glasses shape

● Navigation Bar

User can switch between home page, camera, and settings

Individual Contributions

Anon Kangpanich Project Manager

User Flow

- Design overall user flow
- Design UX/UI Architecture

Tutorial Screen

- Design Welcome & Tutorial Screen

Home Screen

- Implement the Home Screen
- Implement Search Functionality

● Search

User can search glasses by it's name or ithe store they sell

Individual Contributions

Patrick Carey Document Editor

Settings Page

- Created settings panel and progress indicators
- Implement device permission handling

Voucher System

- Implement voucher system

Project Documentation

- Author project documentation

● Voucher

First time user can receive discount voucher after try on glasses within condition

Testing

01

Prototype Focus Testing:

Key features testing showcased in the demo video

02

User Experience Testing:

Iterative testing of the UI and virtual try-on experience using .apk file on Android devices

03

Functionality Testing:

Ensured core features worked as expected

Validation

Real World Testing

Demo Video

Thank You

**You can now try on
glasses anywhere you
want.**
